ANYWHEREUSB PLUS

Connect USB peripheral devices anywhere on a Local Area Network (LAN)
without a locally-attached host computer

IoT business automation requires communication with various IT assets and peripherals located across an enterprise. AnywhereUSB® Plus remote USB hubs give users the simplest and most direct connection options for existing equipment with a variety of USB 3.1 Gen 1 port options. All three models have Gigabit Ethernet support for failover redundancy and network bonding with SFP+ ports in the 8 and 24-port models for higher speeds or fiber networks.

AnywhereUSB 24 Plus is rack mountable with 24 USB 3.1 Gen 1 ports, while AnywhereUSB 8 Plus and AnywhereUSB 2 Plus are desktop or panel mountable units with eight or two ports, respectively, and support for Gigabit Ethernet.

AnywhereUSB can be coupled with **Digi Remote Manager**®, a web-based device configuration and security management platform, to help users reduce downtime. An intuitive user experience makes installation smooth and easy; with quick setup and configuration to monitor and maintain larger installations of remote Digi and third-party devices.

For enterprise and industrial customers who need remote or local USB ports and the higher speeds of USB 3.1 Gen 1 and Gigabit/10 Gigabit Ethernet, Digi AnywhereUSB Plus products give you an industry-leading connectivity solution.
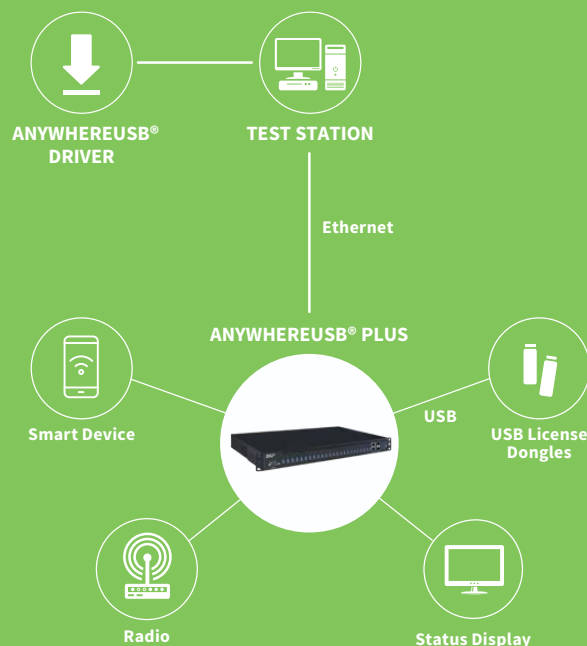

FEATURES AND BENEFITS

– Network-attached USB hubs easily connect USB peripheral devices to a PC from remote or virtual hosts

– Ideal for connecting USB devices over the network in virtualized environments such as VMware®

– AnywhereUSB 24 Plus is rack mountable with two power supplies and Ethernet connections for failover redundancy

– Access and monitor USB and serial devices over TCP/IP connection

– Supports multi-host connectivity for each USB port or group independently

– Supports **Digi Remote Manager** cloud-based management platform to deploy, monitor and manage devices
